

Blueprint Grid Logo Reveal

User's Guide

Thanks for purchasing **Blueprint Grid Logo Reveal** from Videohive. This user guide is meant to help you customize this after effects project. It is not intended to be a comprehensive guide. However, with just a rudimentary knowledge of the software you will be able to customize this project.

Step By Step

Follow these instructions to customize your project.

1. Import Your Logo (logo should have transparent background and no shadow) and your background image. *Go to File > Import > File.*
2. Open **Logoholder**, drag and drop your logo.
3. Open **Imageholder**, drag and drop your background images.
4. Open **Textholder** and edit the texts.
5. Color adjustment. Open **Render 4K** composition, select **Elements Adjustments** layer. Open **Effect Controls Tab** and make your adjustments.
6. Once you finish with all adjustments your project is ready to render in 4K or you can open **Render Full HD composition** to render in 1920x1080 format.
7. I hope you enjoy it! And please direct any questions to my Videohive Profile: <https://videohive.net/user/rexdesign>.

Thank You,

Raiders Sadewa
